

E-Waste Recycling

With the rapid technological advancement, the means for newer and more sophisticated electronic products are in higher demand. The result is a burgeoning mountain of obsolete electronic waste. If these products are not disposed properly it might contain toxic chemicals that will pollute the environment.

Examples of electronic products are computers, television, refrigerator, printers and etc., many of these products can be refurbished, reused and recycled.

Some large manufacturing companies has come out with creative and systematic plans to recycle these obsolete products and promote the awareness of e-waste recycling. This is encouraging, we all should increase the awareness of the danger of electronic waste and to encourage recycling to better protect our earth.
