

Return to Mother Nature and Human Right

According to many research, the earth is taking the severe climate change now. The main reason is that human don't know how to protect their mother nature in an efficient way. You might challenge me about irrelevant for putting both subjects together. How irrelevant for both subjects if we were struggle for surviving without daily food. And it only matters if we could trade the "human right" for bread. The "right" is about to survive or win the others respect with more political involvements or better life. Nevertheless giving up the concept that human is the center of the earth or we are not going to realize why we need to take action now to protect our future by returning the living right to the mother earth.

The world faces variance problems in so many ways; mostly are country versus country. Recently Toronto hold G20 meeting and lots of variance issues between countries to reconcile such as expanding government spending or cut the budget significantly. I rather express my opinion to focus how individual might have huge impact to the society even for the entirely world eventually.

1. Frugality

I actually live in the United States for only nine years now, and everyone learns lots knowledge about how the Green resource revolution can turn the world into the purified, clean and without gas pollutions environment. And believe it or not, now the American spend most research funding for the solar battery industry and even considering how to convert the wind power in reality.

But most American still turn on the lights of business buildings all night long merely for the city beauty and water the grass and trees couple of times per day without limitation for the streets. We may water the plants only once at night efficiently or change the law to turn off those lights during take-off time. The waste never matches the money we save from the solar or wind power.

Frugality is not only to save your expenses and also save the entirely environment because its resource consuming extent. It is the most respectable way to our Mother Nature and the right attitude to save the limited nature resource for the other creatures on the earth.

2. Efficiency

To reach the efficient level depends on the standard procedure and improvement techniques:

Even though we know the oil resource is limited; we don't buy the high MPG car until it is in the market. The world turns into the efficiency very quickly in a decade because we don't have a choice. The Economics always tell us everything is limited, that is why trade and commerce are so valuable for human life. And it just about time to change the living under limitation by efficiency.

The procedure we can follow now is how we return the waste by resource segments management for re-creation into the new resources. Even now we are still developing the techniques for re-create and re-generate the resources from the waste. If the nearly future everybody could live in an efficiency world, it becomes lesser we consume the expensive and pollution- causing resources.

3. Compliance

Compliance reduces the cost caused by variance no matter which form in this world: People, Religion, Wealth, Country, so on and so forth. Hebrews 13:17 (NKJV) said: "Obey those who rule over you, and be submissive, for they watch out for your souls, as those who must give account. Let them do so with joy and not with grief, for that would be unprofitable for you."

The harmony of the society (even for the world) will become the unlimited energy and resource to create the better environment and protect our Mother Nature from the destroys by any kind of war.

Compliance is the manner we don't against the law and abide by the law without reasons. It will build up the trust between each other; and sooner or later it will affect the whole society. The only effort is us. One best example is that we call Sportsmanship in a sports game. The compliance is the best way to return the Mother Nature and human right for my point of view so far. It won't cost us a penny and easy to reach.

To sum up three points of view:

The earth depends on our willing and decision to make this change. So please start to do anything you can make for this world better and don't hesitate to help the others to achieve the same goal that "Return to our Mother Nature" now.

Best Regards,

Yuan S. Lu
