

Have a Self Discipline to Segregating Garbage Properly

Fusheng /Rosemarie Devera

The first thing I can share is to have a self discipline that we can simply begin with the proper dispose of garbage or segregating garbage properly, bio-degradable garbage together, and non-biodegradable also together. Because throwing garbage just somewhere may caused clogging the drainage and flood may happen. We have also to educate others not to ruin plants because plants helps prevent flash floods and helps freshen air. One thing that gives us more not climate is the one layer that has already damaged that's why we need to plant more trees. Fire, flash, floods, landslide are all environmental damaged that cause people to experience more on puberty.
