

Let's fight global warming together

Over time the world has changed, but the world has changed because of us, because of how we treated it. In the future if we continue to treat the world this way the world will be so terrible that we won't be able to live in it, children won't be able to live in it, our chances of living will be so low that even newborns will die. We need to treat the world better.

Do you know how global warming is formed? Well, global warming is happening this second and it's getting worse. Global warming is formed by us releasing greenhouse gases into the air. As the greenhouse gases go up into the air and form a blanket around the earth. The earth's atmosphere will get thicker, and this is called the greenhouse effect. This is just like when you are cold, you cover yourself with blankets. As you cover yourself more, you get warmer. The same thing is for the earth, greenhouse gases get released into the atmosphere and it forms more and more blankets there for the world gets warmer. That is how global warming is formed.

Do you know how global warming has been doing to us all this time? Global warming has been melting our ice caps and the Arctic. If all of the Arctic melts, small islands such as Taiwan and Japan and even most of china will be flooded. Most of the world will be under water unless we stop global warming.

We can do anything to stop global warming like not using fossil fuel and using solar energy. The best thing to do in use the 3 "R's" they are reuse reduce and recycle. Let's fight global warming together, every person can make a difference.
