

Contributions to the world society by stopping the pollution

To help the society, we should recycle paper and bottles. Then we won't kill trees that give out air. Bu reusing paper and glass. Other wise we could stop pollutions by taking buses and carpooling. If we don't do one the earth will be polluted so we can't breathe that will also happen if there's too much garbage and we send them off to space plus we need gas to send them.
