

Factories, Cars and Smoke

Griffon Kim

John Muir Elementary/ 4th grade

Factories make a lot of stuff for human. Humans never thought of the disaster they are making. They are making smoke. The smoke they are making is flowing up the sky and make the earth dirty.

Then, the cars are making smoke too. They have to driving cars less and ride bike more. Humans think the cars are fast, but they do not realize that they are hurting the earth.

Finally, the stuff people use to make fire and the smoke it makes always hurt people. Forests fires burn the woods and make smoke. The animals in the forest will not have home.
