

## **“How to save our mother earth”**

**Arabain, Salima A.**  
School of Allied Medicine  
Universidad de Zamboanga  
Zamboanga City

As far we need to avoid illegal loggings pollution, whatever disaster will come we can be safe. We are prepared and we need to care our mother earth, like plants o lot of trees and don't throw anywhere your garbage and don't burn plastic because it can affect our ozone layer and also if we throw garbage anywhere when a typhoon came, we will experience landslide, floods, and so many disaster, that's way don't throw garbage anywhere, throw it in proper place. And also don't cut trees to avoid landslide. We should protect our mother earth for us to live and happily with our family.
