Universidad de Zamboanga
Zamboanga City

Our environment is changing every year due to different effects coming from factories, automobiles, burning of our branches and many more. To save our environment we need to take action about this waste. In our own little way we can contribute by not burning our garbage instead we bury it. We can tell those illegal loggers clean let them plant new trees or replace it so that to prevent soil erosion, floods due to plenty of trees. Even our relatives we can tell them the effect of not replacing the trees that they have cut.

There are many automobiles that we use now a days, to prevent from damaging the environment we can use bike instead or walk if it's not too far by doing it we can exercise our body. From our garbage we can be recycle. By saving the rivers, we should not throw our garbage or waste on it to prevent from damaging the rivers.
