Universidad de Zamboanga
Zamboanga City, Philippines

Earth is the only planet wherein human beings can live. So we should do our best to protect it. To protect the Earth, there are ways to save it.

Plant a tree, because as of now we are experiencing heavy rains, so we should plant trees to avoid flashfloods and landslides. Flashfloods and landslides are effects of too much rain and lack of trees. One thing is air pollution. One causes of air pollution is smoking. It is not only bad to one's health, it can cause also air pollution. Another is we should always throw our garbage properly, especially non-biodegradable. We should learn how to separate wastes, there are recyclable wastes that we have to separate. Avoid throwing garbage in a river or sea. That will avoid sea pollution. Remember we are getting our water from the river. We are also getting food from the sea. So if water will be polluted we cannot use these bodies of water. Always conserve water. There are times we are running out of water like during El-nino.

There are several ways to protect the earth. So we should do something about the earth. Let's protect it. Always remember that earth is the only planet that we can live in.
