Zamboanga City, Philippines

The earth is very important because it has the form of life. God created it and gave it to us and for us to have a better place to live in. but we have also the responsibility as a people living in this earth and that is to protect the earth, to help maintain its cleanliness and give the love to environmental nature. But now, as the years go by, time changes. We have now our new generation and especially the invention of modern technologies. And it will cause pollution, global warming, green house effect and floods. So these will give a reason to really destroy and damage our earth plus the abusing of the people on our environment.

Here are the best ways to do on how to save the earth: recycle bottles, plastics, cans and papers. Change your light bulbs, use compact fluorescent bulbs with an energy star label. Buy local or from companies that support sustainable practices. Grow a vegetable garden. Start compost. Ride your bike, carpool or walk when at all possible, this will cut down on carbon emissions and money you spend on a car. Reduce consumption and waste. Reuse whatever you can, keeping the cleanliness in mind as well. Instead of buying bottled water, use a water fitter instead. And that's all the best and simple way to save the earth.

We need to help each and everyone, discipline our selves, respect, determination, strength, faith, hope and give love that everything surrounds us and give importance to it because this is the gift of God to us, so we should take care of it. We should pray for a better chance and I hope that there is really a big chance to change the bad things into a good things for us to be able to survive in any calamities will occur and so the earth will be beautiful and clean again for a long period of time. We can only experience the beauty of earth once in a lifetime and we should pray for a better and good tomorrow.
