Zamboanga City, Philippines

Despite all the effort to save the world by gaining support globally for environment programs. However, every individual can help to save the world by setting a priority in daily activities.

Remember our earth created by God and we should take care of it and treasure because earth is only one. What will happen if the earth is totally damage, do you think there will be a replacement? Definitely no. Think about it. What will happen if the earth will revenge to us? We should thank God for his glory and generosity.

Last year Metro Manila experienced a very strong typhoon wherein many people died due to flashfloods. People have contribution to the flashfloods.

More people are becoming aware of the importance of saving earth. Indeed the sense of urgency behind the drive to save the environment is stronger than before. I wonder if people can make solutions. In fact many concern citizens do this in their home like recycling. Recycling is well known by people in most modern countries. You can use several boxes and separate out items for recycling such as plastics, glass, papers, etc.

We should plant trees. Reforestation is an excellent project and can be done easily. Actually trees contribute oxygen in atmosphere. In saving the world it should be done liberally at home.

One reason why global warming is getting stronger because of too much carbon dioxide being emitted. We should do some calculation to determine your carbon footprint.

We are creating the pollutants; we are the ones destroying the earth. What will be left for our children?
