

HOW TO SAVE THE EARTH

Munnar C. Dimaransing
BS Nursing
Universidad de Zamboanga
Zamboanga City, Philippines

Saving our Mother Earth is not easy for us because of many people who don't care about it but because of experts and other people who are concerned about the environmental problem just like global warming, greenhouse effect and our pollution that came from factory and etc. that produce our pollution into our environment that may destroyed our Mother Earth easily and also the garbage in the river that make the water dirty and turned it into canal.

We can save the earth by recycling. You can help reduce pollution just by putting that soda cans and other things that can be recycled in different bin, and if you're trying to choose between two products you better pick the one with the least packaging and also that if we can just leave our car at home, if you can stay off the road just two days a week, we can reduce green house gases emission by average of 1,89 pounds per year but for me going green is easier than you think. There are little things you can do every day to help reduce greenhouse gases and other environmental problem that can make our mother earth destroyed and also make less harmful impact on the environment. Taking care of the earth is not just a responsibility it's a privilege.

When we lack respect for the environment and the earth, we are inevitably damaging or killing ourselves as well.
