Zamboanga City

Our planet is in great danger. For the last one hundred or so years, the people of earth wasted and misused the natural resources of the earth. And now, there are many environment problems that many individuals feel they can no effect on them.

Problems like oil, spills, hazardous waste, loss of rain forest, endangered species, acid rain, and ozone layer, and municipal waste crisis can feel out of our control. At very least, these problems require group and corporate action.

So, we as a people of the earth we must protect our environment, and give concentration our environment because it will lead harmful. If we don't protect it.

We need to make sure we don't put chemicals or non-biodegradable substances into these landfills because they are harmful to plant and animals. We should recycling all our animals is the only source that we can have our food to still alive. So that we must give important plant animals.

The earth is the only place or planet that people can live because earth is the only planet that contains natural resources like plant, animals and atmosphere that is important between the people. We must protect our planet or earth because earth is our only home.
