

How to Save the Environment

Anizia Hussien

School of Allied Medicine
Universidad de Zamboanga
Zamboanga City, Philippines

As a student I observed that our environment is being destroyed by human. Like cutting of trees, throwing garbage anywhere without segregating, air pollution cause by huge manufacturing companies, throwing of wastes/chemicals in our river/sea, dynamite fishing, these are the main factors that being destroyed are environment and the only way to save and clean is to help each other, protect are environment from the people who are destroying it.

We need to protect our environment very well, protects all the small fishes at the sea don't throw garbage, stop cutting trees and help each other to protect our environment and stop doing crimes we need to have an organization due to the protection of environment and people must be responsible of it, because we are the one who is living in this earth.
