Universidad de Zamboanga  
Zamboanga City

As we observe this day, our environment is destroyed and need to be repair to continue getting a benefit on it. There's a lot of ways in saving our throwing the garbage on its proper disposal, recycling the garbage that can still be uses and also by separating the non-bio and bio garbage.

There are also some illegal activities by human that contribute to the destruction of our environment. This includes; illegal logging, kaingin system and cutting of trees. So, to prevent the environment in getting worst, these activities should be legally stop or discontinue with the help of the higher people in the government.
