“How to save the environment”

Illegal logging, chemical waste, air pollution from factories, vehicles and etc. dynamite fishing, throwing of garbage's on the river, water pollution. Deforestation and smog. These are the most common problems that our environment experiencing today. We all know what are the bad effects that it could give to all the living creatures especially when we talk about their health. Today our mother earth are suffering from continuing cutting trees that my lead to flood and we the people are the first to be the one affected and also our properties and this is because of illegal loggers too much cutting of trees.

To stop these problems. The first things we need to do if we don't want to occur or experience this problem we should start it from us, like putting trash cans in every corner so that they will not throw it over the river or we can use waste receptacle. About the air pollution, drivers should know what are disadvantages of having polluted air that we are inhaling they should find ways on how to fixed this vehicles problems. Also throwing dynamite on the sea that may destroy not only the fish but also the coral reefs where they could stay. There are legal ways in catching fish we can use nets, it could only catch fish but cant destroy damage other sea's creature. By doing these things our mother earth will no longer be experience those problems and we will have a peaceful and clean environment.
