“How to save the environment”

The environment surrounds us. It is the most common force that mankind faces every day. Yet, we take things for granted. Resources what makes our environment. These natural resources basically make up man's most basic essential needs. Man essential needs are the following food, shelter, clothing and even medicine. We get these from the environment.

These are many ways to save our environment for most people they use the three R's: recover, recycle and reuse. The recovery phase is the most basic of all. People think that garbage are not of use, but garbage can be useful in many ways. People can recover metal, tins, plastic, wood and fabric to be recycle in a more useful things. Word for instance can be made into jewelry boxes, plastic to a recycle lamp shade or ball pen holder. These are being use in our everyday life. Re use is what most people doesn't want to do. They tend to buy designer lamp shade, bags and etc. for their personal use but they do not know that buying recycles materials not only help the environment out also those poor people who have their livelihood, making recycle bags. Example of this is the KABS-TO-RICHIES Foundation, which is known for their recycled and designer bags that are being sold in shops in Paris and New York. That is an example how people care and can save the environment.

Earth is only one. It is unique so help as save it.
