“How to save the environment”

There are many things or ways we can do to save the environment, such as avoid slow burning smoldering fires, because they produce the largest amount of pollution, second, unplug seldom used appliances and use only when you need them and turn off the unnecessary lights when leaving a room for a short time. Plant a tree so we should start digging because during photosynthesis, trees and plants absorb carbon dioxide and give off oxygen.

These few steps will make us more environmentally conscious and through this, we feel better about ourselves, because in our own little way, we made a contribution on how to save our environment.
