“How to save the Environment”

Being an individual creation of God, he made the heavenly bodies the water and the earth. He made it for the benefit of each human being. In return we must take good care of it.

We should be observant of what is happening around, we should plant more trees to prevent global warming, and to have a fresh air to breath very important is to have a healthy way of living.

We should teach children on how to save mother earth. We need to tell them what is really happening around us because most of the children aren't aware about their environment, we should advocate many strategies on how to help saving our own environment for this is our life without our mother earth we can't loved.
