“How to save the earth”

To save earth we need to plant trees so that if the storm will come we can avoid flooding and we must not pollute the air just like the smoke of the factories and burned garbage, so that we can have a fresh air to breath and we need to plant trees on mountains so that it can't prevent landslide.

Why do we have to save the earth? We need to save the earth so that we can have a home to live and food to eat, and all living things can have a home. If we will not save the earth where will we live? Or get food? We can't live without the earth because earth is our home and we can have food from it so that we can live because only earth has fresh air and foods. That why we need to case it.
