“How to save the Environment”

Our environment plays an important role to us because it is the place where we used to live every day. It is also the beginning of our own lives wherein we are embracing it in times when we are starting to build our dreams and plans in life.

Nowadays, our environment is already ruined and day by day we felt the effect of it. So, we as a human being, we have the responsibility of making any solution on it that could eliminate this suffering. First, the common activities that we are doing everyday are throwing our garbage's anywhere. This is just a small thing but it causes big effect in our environment. Instead of throwing it anywhere, why don't we throw it directly to the trash can or just put it in our pocket at least in that small thing we can help on how to save our environment. Second, cause is by burning plastic which destroys our ozone layer. That's why we are experiencing too much heat which is not good to our skin. So, instead of burning it, why don't we separate those biodegradable from non-biodegradable and those non-biodegradable, we can recycle it. Another is illegal logging. It affects us so much even slight rain, it could have flood, what more heavy rain?. So, in order to avoid these problems, we must know how to save our environment. We can cut trees but be sure that we also plant another one.
