

## **LOVE THE EARTH**

Bahari, Zhieralyn A.  
BS Nursing  
Universidad de Zamboanga  
Zamboanga City, Philippines

Earth is the fifth largest planet on the Solar System, the third planet from the sun, and the only planet wherein we live. It is our homeland, a precious gift from Almighty God. As the civilization goes, all of us want to be at the highest peak of success, and through this reason we actually destroy the earth.

Being a student, are you aware of the calamities and other phenomena that we are experiencing now? Do you have any action to avoid having these kinds of phenomena? How can you contribute to lessen the earth's problem? If you, yourself can protect your love ones, so why can't you protect the Earth? If you can remember your obligation to your family, so why can't you remember that we do also have obligations to the Earth? If you just waste your time in a nonsense thing, better use your time for solving the earth's problem, even just throwing your garbage properly will be a big help in saving the Earth's condition.

Man and women, wake up! We are on the midway in our life's journey, so stand up and take the lead for saving our earth. Start from yourself, down to your family and spread it in the whole community. Love and appreciate the earth as our own, as we do love ourselves. Be a good example to everyone, in order for the next generation can have a better homeland. In doing just simple ways, we can help in saving the Earth. Do it right now, there is still time for us to save the Earth because if we will not move now, maybe it will be too late if we'll do it tomorrow.

Let us heal the world and make the Earth a better place. Have faith on Him and pray for the Earth safety for there are many people dying due to those calamities. We are the one who makes these calamities, so we are the one who can also stop it. Be responsible, so move now.
