

## **LOVE THE EARTH**

Dela Pena, Edlyn C.  
BS Nursing  
Universidad de Zamboanga  
Zamboanga City, Philippines

Earth is the only planet we have to call home. It is very important part of our lives. Most of us wouldn't think of polluting our bodies, yet we are polluting our planet by misuse and aversion of our natural resources. We are not completely to blame; we inherited a polluted earth but we can do something to ensure that our children can grow up in a cleaner, safer planet than ourselves. Don't ever let someone get away with saying, "What can I do, I am only one person?" Each and every person can do a lot and you can influence others to do something as well.

As a responsible individual we should at least do what we can to help reduce, reuse, and recycle what we can, as a first step. There are many different ways to save the earth and all things living on it which are being affected by the habits of modern human life. There are also many ways to reduce the destructive impact we have on our planet. For earth day, learn what you can do to take an active role that promotes better care for at least one thing that would improve the earth's environmental well-being. Earth's oceans are in peril due to overfishing, pollution and global warming. Consequently, marine life is declining at an alarming rate. Each person has a responsibility to take actions against these atrocities. There are number of ways you can get involved to help save endangered marine animals. From becoming a member of one of the various conservation organizations to organizing a fund raiser in protecting the world's ocean and their inhabitants.

It is great to talk about how important the earth's environment is to all of us, but it is more important to put words into action. Some actions on our part are very simple but yet, seem to be forgotten. The challenge of our time is the improvement of the quality of environment so that future generations of youth can also use these resources in our mother earth.
