Earth, is a marble-like planet. It is composed of water land, natural light coming from the sun and oxygen. It is the fifth largest planet of the solar system. Yet, it's the only planet where living things can survive. God created us and all the beautiful things around us. He blessed us with precious, priceless and boundless natural resources where we could get our source of living such as food, shelter, clothes and air for us to survive. Therefore, we must love and protect our Mother Earth since we are living in it. But how could we save the earth from terrible acts of the other people who keep on destroying and killing the earth slowly as time goes by?

Nowadays, the earth is experiencing global warming because of too much pollution, deforestation, none-proper disposal of garbage. The ozone layer is slowly being destroyed. Our mother Earth is dying in the hands of the people who don't care about the environment except for their selves. We are no longer breathing fresh air, polluted air instead. If these wrong doings will still continue, the earth will no longer exist and the next generation would not be able to witness the original beauty of nature.

If we want to avoid each catastrophic thing to happen, we must refrain from doing things that might affect our environment. We could start from simple things like throwing garbage properly, avoid deforestation; if we cut trees we should make sure that we plant new ones as replacement. These simple ways could be a great contribution after all. It's time to make a difference before it's too late, because it would be more nicer to live when there is fresh air, peaceful home and beautiful scenery. If we want to save ourselves, therefore, we must save the earth.
