Why do we have to save the earth? We need to protect it simply because it is the place where we live. The earth is given to us by God to love and to protect it. It is our responsibility to take good care of it. We need to protect it from being polluted and damage. If you are going to compare the earth 100 years ago and now, the environment today is not as clean as it was. Thousand of factories and buildings have been built for the past years. In many areas, highways have become crowded with cars and other vehicles. Every year huge amount of waste dumped into water and land. Look around us, the earth today is far different from years ago. Now it is our time to change and prove to God that we deserve to live in this earth. We need to save the earth.

Look around at the things we use. We use pencils, paper and books. We walk on the land, drink water and breathe the air. All these things are natural resources. For us people this is very important. The paper, pencils and books we use comes from the trees. Trees are natural resources found on earth. The earth and its resources found here are very important. So we need to protect and save it from being damaged.
