The most important thing that our world must have is world peace. As the meaning of it, World peace is a freedom in every nation, beliefs, religion that we follow or we belong. So I can say that if we have world peace, we individual have the freedom to share our feelings, express or knowledge and we can communicate well to others. We can also make good things and because of that we can make our world happy, well and free from war.

Nowadays, there are so many bad things or experiences, that our world is facing. War in different nation, different religion, beliefs and others. So this is only means that we don't have world peace. If we stop this war among our nation, maybe or yes we will attain world peace. And as an individual I believed that we should start it from our selves. We can make world peace happens.
