A little bit of negative feedback in terms of the behavior of the youth nowadays is far different from the old ones. They seem to be acting frantic. A particular cause is the great influence of by using the toxic drug like (shabu), Cannabis sativa (marijuana), and etc. those drugs contain toxic chemical substance which can really affect our brain. If our brain is affected there is a possibility can't function well and it can leads to mental disorder. If our brain will be ruining Peace in our mind it will be affected. Fortunately to say if there is a problem, there is a solution. Through Media we can obtain information on how to treat mental disorder via publishing on the television and even current events happening in the country. Through Media the youth tries to imitate what they view from the different shows in television. The shows comprise the news events, fashion, stories that have great effect on the mindset of the youth. For example the story about Prophets of ISLAM we can see in the television it is a one way to get a better lesson for the Muslims to have an idea maintaining Peace, Unity and love their own fellow human beings. By then we can enrich our values. I think there are youth which has now become under the influence of Media especially those with high intellect are prone to imitate the positions of some good political leaders portrayed in the Media. Actually, if we have a good leadership in our country the relationships of Muslims and Christians together works hand and hand. Other particular advantage of Media is to learn other language. Like tagalong that we use to communicate with other tribes in the country. We can also learn English-a great tool for learning since it is the medium of instruction in schools and offices.

Much more when we deal internationally, English can help us to transact smoothly with other people. Through Media other Countries wanted our Society to become peaceful. By then they forever market their high technology products. They advertise everything to us in the media in order to convince us to consume their products like Laptop, cell phones for us to have a great tool for communications and other technologies to help manipulate the different problem or Situation in our country Philippines and also help us inform the economic condition especially the prices of basic commodities, which are spiraling almost every day.

We thankful that we have a Media to give a solution for us and provide more information, we can gradually acquired knowledge and most of all teaches us the right course of everyone of us on how to build up Peace and Unity entire World wide as well.
