Zamboanga City, Philippines

Folks! Are we aware of the place where do we live? The one where we adjust and adapt our self? Some of us would give their home address but it's not the number of street names what I mean but it is where we all living things lived and exist. It is our home, a habitation where it is our duty to preserve and conserve the magnificent view of its environment. In this day and age, are we aware of the facts that the earth is now facing a great obstacle that we are actually made up? One of this is abusing the technologies which result to the global warming. It is said that it's in 21st century that remarks the year where in we are now suffering and living through the hottest year from the last thousands of years.

Nowadays, we are experiencing a lot of environmental problem that affect the whole world. These horrific changes we encounter everyday are the message coming from the future generation. It simply warns us of what would exactly happen in the future. One of the video entitled "**123**" basically provides us the different scenes that will actually occur in the future. People wear synthetic dress in order to save water. Women in that video were hairless because of the shortage in water that they couldn't wash their hair with shampoo. But why do people keep ignoring it? They always react by this line:

"Well...I don't care of what will happen in the future. I think I won't reach that age...There's no need for me to worry about it."

Could this people realize their biggest mistake? Each of the individual ignored the various project given by the government in order to minimize the production of different environmental problem. But why do people keep on doing a particular activity that was actually one reason why we are suffering in a large amount of trouble. Why won't we try to do our part to save the Earth? Throwing one wrapper of a candy in a proper place could simply help our environment to control the immediate destruction of it. Imagine a billion of people in the whole world throwing a one wrapper of candy in street, It will surely cause a big problem on us. Let's simply start to help our mother earth by our own simple way. Let's start to restore the previous version of earth. The earth that was rich in different natural resources, the earth where we lived since the creation of it. There still chances for us to change the world into its magnificent nature.
