Zamboanga City, Philippines

Every day we hear more bad news about our planet. Reports tell us that wildlife and forests are disappearing at an alarming rate. Newscasts give the latest word on how quickly earth is losing its protective shield and warming up. Newspapers lament the pollution of our air, water, and soil. Mother earth is an important subject that is taught at all academic levels. Many students struggle to write their mother earth summary, advantages paper or study about Mother Earth. Peace is a dynamic process. It requires courage, action and awareness. We must awaken to our common threat. We must redirect the energy previously wasted in conflict toward appreciating and preserving the awesome gift of life on earth. If we don't act who will act, if we don't clean our mess who will clean our mess? Let's save the earth all of us together. It is our choice how we going to save the earth. How about the new generation? How they will live here with our own mess.

We can recycle materials like trees, recycling newspapers saves trees. Not throwing garbage to oceans, rivers. Don't throw anywhere, even candy wrappers you can recycle be eco-friendly. Buying products whose packing shows the recycled logo. Materials that have been recycled once can be recycled again. Be king to our planet by buying eggs, fast food, and other products in cardboard instead of Styrofoam cartons. Hazardous wastes include paint, old car batteries, and oven and drain cleaners, mothballs. First of all we should store hazardous materials properly by keeping them in their original containers, making sure they are clearly labeled, and keeping them in a cool, dry place that is out of the reach of children. We can reduce of our use of these products by buying only what we need and sharing them night be left over. As a student I can help saving the earth by making art that is recycled, throwing garbage properly, recycling newspapers. They can relieve some newspapers. They ca relieve some of the helplessness we all feel when faced with the threats of global disaster. I hate when someone will burn dry leaves because the smoke is not healthy, we can breath it in and it will cause bad effect. We should care our only one earth. The ozone layer is destroyed if we will continue to burn or to make a smoke. Cutting trees also with out the permission of management, if you cut trees make sure that you will plant again, and Bombing the oceans to get faster the fish.

So, do not wait until you have nothing to do, save the earth now. It is in our own decision, own hands to protect the earth. Solutions have its own problems, problems has own solution, if we will not work together it will not work so lets make it together, all of us, so do it, we can do it if we will try. No one is perfect, all of us have mistakes in our personal but this is not a valid reason why you don't care the earth, your angry with the earth it's helpless. So if there is time to make the earth feel better, let's make it together.
