The earth is only one planet in the universe that has life. Water, soil, and most importantly, the environment are located at the planet earth, and that's why all living things on earth can survive.

Humans, like us lives in the earth, we are the ones using and creating some materials using the trees and in our nature. But, it has advantages and disadvantages for using the nature for creating the human needs. The advantages are can make or create chairs, tables, and many furniture. So that it make our life easier and comfortable. But, the disadvantages of it that the other people cutting too much of trees, some people using dynamite for fishing, and others also destroying forest to build factory and houses. These disadvantages can cause flooding, eruption, greenhouse effect, and climate change.

In growing years, the population is growing higher and also the environment is getting affected because of the pollution. First the air pollution, because of the smoke of the jeep and the motorcycle, burning of garbages and some people using cigarette and our environment became polluted. If the air pollution is getting higher, it can cause SMOG. Smog is dangerous to our respiratory most especially for the children. The second is the water pollution. Like Pasig River, there are many poor families living at the river. The people beneath the river are throwing their garbages, waste, and also dead animals. Other people using the river for washing themselves and that's very dangerous for them. Not just only the mother earth and the environment will be affected and become dangerous but also the humans.

We, all human must be active. We need to save and protect our mother earth from danger. We need to clean our surrounding. We need to stop cutting and destroying of trees, stop also using dynamite for fishing, avoid throwing garbage anywhere most especially on the river.
