The season's flow, the sun and moon shine on all, weathers rage and earth's creatures bask in mother's nature's presence. Prayer has been made to mother earth that she blesses us with knowledge required to exploit the treasures of the nature but without disturbing the environmental balance.

Like many people, I once trusted in the wisdom of nature. I imagined that there were real boundaries between the natural and the artificial, between one specie and another, and thought that with the advent of genetic engineering we would be thinking with life at our peril. I now believe that this romantic view of nature is a stultifying and dangerous mythology was sitting on our blessed mother earth from which we get our strength and determination, love and humility. All the beautiful attributes that we've been given. So turn to one another, love one another, and respect mother earth, because that's life itself. Is a common personification of nature focus on the life giving and nurturing features of nature by embodying it in the form of the mother, the personification of nature as a powerful and nurturing woman.

In the broadest sense is equivalent to the natural world, physical universe, material world or material universe. It refers to the phenomena of the physical world and also to life in general.

Saving Mother Nature is in the hands of the people.
