Universidad de Zamboanga
Zamboanga City, Philippines

Earth is more than just a planet in our solar system because it is the planet where human beings where live. Earth also provides us protection. It also provides us the lands, trees, and other things we need. There are so many factors in our environment. Our environment is now polluted. We have so many problems in our environment. The root of all pollution is the human growth population people are the one who abused our environment. Our environment is now contaminated, because of the garbage's. If we observed our lakes, rivers, are unpleasant to see. Because people is throwing their garbage everywhere. Even our air being polluted, because of the vehicles using fuels. We are now experiencing global warming. Because of it, our world is being too hot.

So in my opinion, we should take good care our environment. Because we are part of it, we should not destroy our natural resources. Animals need habitats, we also need it. So we should not abuse our natural resources. So that someday, we can see how beautiful earth is. We can make difference; we shall do the best way to make our environment balanced. We cannot predict what will going to happen in our environment. So the best way is, we should take care and project it. So we shall do it right now so that it will not be too late for us to save our mother earth.
