Imagine dropping a penny into a glass of clear liquid and watching it slowly get eaten away and disappear. This is what happens to our mother's earth natural resources. The place where all humans stay and live is much of abundance where everything we want and asked is just perfectly all around us as provided and God's gift to us. We are fortunate enough to have all in our surroundings way back before as what was told in history those people of none or less knowledge have more love for nature as compare today. We are again lucky because what mother's Earth has is for us to be use for survival. Its all good for our health including animals and plants.

Unfortunately what happen when people now a day's miss-use or abused it. We saw and hear on any media the destruction that happens everywhere the world? Rich countries produces factories, cars, buses, trucks and uses gases that are very much harmful to people and our environment and expect more air pollution. Dumping of poisonous chemical to ocean, rivers anywhere it can living creatures at sea. Landslides are everywhere because quarrying is rampant in remote areas which results to devastation during heavy rains and typhoon. These are just few of what people do to mother's Earth natural resources. That's why all of us are facing these problems and even other countries too. For us, as a student it's time for us to be useful to help example, we should not throw anywhere or proper waste disposal. Re-used whatever can be used to lessen our garbage. Report if we can see illegal loggers, quarrying or those people that are abusing our natural resources instead of protecting it and preserving its natural beauty.

We should love and preserved our mother's Earth natural resources because it's our own. We must not abused it because in the long run what we have done it will return back to us in the form of destruction and devastation of all what own. That's why starting today and onwards let's not abandoned our environment instead help for its development, preservation its habitat and respect what's God game to us in order to survive.
