Zamboanga City, Philippines

One way to save our Mother earth is to recycle as much as many types of things. You can get recycling cans that can easily make it a habit of recycling the bottles and the cardboard boxes. This is the only way to save our environment, but it can also help to save our money. Separate all the Biodegradable and Non-biodegradable materials; clean the creek so that it will not stagnate. Likewise, picking up the trash that other people get rid off in unsavory ways and it will help the Earth stay clean.

The smoke of the vehicle must be securely cleaned and should pass standards of environment safety, because if not it can add to our air pollution that causes Greenhouse gases to be trapped thus bringing Greenhouse effect.

Plant a tree so that it will sip the flood that causes landslides and mudslides. We need to cooperate and help everyone so that we can do it perfectly. By cleaning our surroundings such as, removing all the garbage that clangs in water lilies or plants in the creeks, that causes flood as what had happened last year in Manila.

Have an environment party and hand out bags for everyone to take and walk around our town or along the roads to pick up trash. Minimize using appliances that destroys our surroundings. And finally, never burn plastics and other products that contributes to the destruction of the Ozone Layer. Start now and move for a better change before everything is too late to bear.
