Zamboanga City, Philippines

Do you see our environment? Can you describe it? Do you know what it looks like how many years ago? Are there differences from our present environment? Who made these changes?

Our environment is our surroundings. Everything that is created by nature is part of our environment. These things should be treasured like precious gems. Our environment should never be destroyed. It should be saved!

We people are the ones who destroy it and we people are the ones who can save it. Children can contribute in saving our environment. People of different ages and people from different nations should work hand in hand to save our environment.

We can never deny the fact that our environment now is really different from the environment before. Fresh air, many trees, blue rivers and crystal-clear rivers are present before. But now, fresh air can only be felt on some rural areas. Trees are then cut down without replacements. Blue seas and crystal-clear rivers do no longer exist. Most seas and rivers are full of garbage and other human wastes.

Many people think that technology can help us succeed in everything. This is halfway true, but we do not realize the fact that at some points, technology can also ruin our lives, like most factories do. Most wastes of factories are thrown in the bodies of water. Because of these wastes, sea creatures die. Many marine lives are destroyed. Because of illegal logging, many trees are cut down without replacing them. Because of this, birds and other flying-creatures no longer have their habitat. The different human activities really affect our environment.

We humans are born to save and care for our environment. We were not born to devastate and destroy it. We should work hand in hand to save our environment.

This is the time to start to save our environment. We can start it by following these four steps. We should segregate, reuse, reduce and recycle. All of us can help in saving our environment in our own little ways. Help save our environment. Help save our mother nature.
