Mother earth needs more love because she is now dying. Humans abuse Mother Earth, they cut trees to sell and to make it houses, and worse they're not replacing it. With the pollution brought by vehicles that releases CFC's that destroys the ozone layer. And now we are experiencing different problems from our surrounding, global warming, climate change, and other different calamities. Our mother earth wants to convey to us that she needs us.

Our planet is wonderful. Here we can leave peacefully. As time passed, Mother Earth is being destroyed by us humans; instead we are the one who should love and care to our Mother Earth. The modernizing of our present generation is becoming rapid, all inventions make our live easier, but we are making also mother earth to suffer because of the pollution brought by vehicles, aircon, etc. Though these inventions make our lives easier but there are also disadvantages.

Trees, if we have more trees that absorb greenhouse gases to process carbon for there food, but our trees now are rapidly fading because of illegal logging. In return they don't replace it. They are not replacing it. They are not caring for our mother earth they only think there own benefit.

Our Earth is wonderful but we are abusing it. If our mother earth returns what we did to her all of us will suffer, all of us will undergo pain and sorrow. So we should start to restore the beautiful of our beloved Mother Earth.
