It is amazing how mother earth loves us Filipinos so much, to pride us with everything we will ever need: water when we are thirsty, food when we are hungry and everything else. There can never be a perfect place to live in than here in the Philippines. Its people are blessed to be given the chance to experience its gifts. Yet with the natural instinct of man to stand alone, a Filipino focused on another path different from that already planned by nature. This can only lead him, whether he is aware or not to his own destruction when his plans flop.

It seems impossible for a country so blessed with natural resources to experience even the slightest of problem. It seems impossible for its people to experience poverty, loss or even discontentment. With a land o gifted, residents outside the country could only presume our problems to be not concerning our needs, but we Filipinos know the fact it is just that. For what led us to these difficulties that ever the lightly blessed countries did not experience? For one, in our efforts to make life easier for us, we've convened on something we thought could help us- fossil fuels for energy.

One fact is that energy has become a vital input in a country's growth. It presents the Philippine energy needs have been efficiently fulfilled by fossil fuels. The continuous consumption of which yields negative economic and environmental threats for one in a country's depends on fossil fuels, it is exposed to oil price and fluctuations, which can seriously undermine the energy and security of the nation. Because of this, food prices and transport services directly affected by oil price in the market, poverty ratings group end the race to survival begins. Another is the combustion of these kinds of fuels create large amount of greenhouse gasses release. An increase in concentration of there gasses, through emissions, causes an imbalance in the earth-atmosphere system.
