Zamboanga City, Philippines

Do you know her? Do they know her? Do all of us know her? But the matter is do all of us know how to protect her? Do all of us respect her? If you want to know who she really is, then this is the time for us to know her and to know why she is important. This selection is important for us and especially to those who only know what to do is to destroy her.

She is our mother earth; she's one of the reasons why we are existing. She's one of the most amazing planets in the galaxy; she's also unique among all other planets, because she's the only planet where people like us exist. She's has also the most beautiful place, trees, animals and other existing things that cannot be found in any other planets. In our mother Earth we can found beautiful environment and surroundings, but now a day all of this beautiful environment and things are slowly being destroyed by humans or people who don't know how to protect her. People like us are just throwing our garbage and wastes anywhere that causes air pollution and even water pollution. Talking about pollutions, this is the main factor why our mother earth is now damaging. If we really care for our mother Erath, we should not do things that we know can have a negative outcome for her. So if we really want to save her from dying, we should make things that can help her in bringing back her beauty. A student like us can help, like throwing the garbage in the proper place where it will be thrown, we should also conduct a group cleaning in school where young students are involved, so that as long as their still young, they already know how to save mother Erath even in their simple way. Teachers should also conduct a tree planting or any activities that involve planting that can help mother Earth in recovering.
