Zamboanga City, Philippines

I know some people are cutting the tree but they didn't know it can affect some people. And it can affect also the animals that live in the forest. Many people ask why it is some people cutting the tree. It can affect people because if there are no trees in the forest, may occur landslide and there will be no food to eat and there will no place to live for animals.

And everybody knows that we have problems also with pollutions because many people cause this. Because many people are smoking, throw the garbage's anywhere that's why many people get sick. In this country and also to the other country it has many problems because many people do not listen to the other who tells the right things to do. And many people also need help from the leader of this country and also to the other country. But I know that from the past leader they didn't affected from this problems they didn't see that many people affected from cutting the trees and from these pollution I hope that the new leader now from this country will help and affect also from this problem.

I hope that some people will help solve this problems not only the leader in this country because he/she can't solve the problem alone. Because this problems started from us that's why we should help.
