

HOW TO SAVE THE EARTH

Sindayen, Jehan B.
BS Respiratory Therapy
Universidad de Zamboanga
Zamboanga City, Philippines

It is pretty obvious how polluted earth is now. Considering those global warming, thinning of the ozone layer and greenhouse effect, earth is indeed in danger. In its present condition, earth is no different from a cancer patient. This major problem is not just the authorities' problem but it is every human problem. In the first place, earth will not reach this level without human cause. We also have to take note that we are not the sole creatures affected on this problem, animals too are much affected.

There are many plenty steps, simple ways that we can do and start to do today. These steps can be done by every citizen, let it be old or young ones. Let's start by keeping our garbage and not carelessly throwing them anywhere. Learning how to recycle is also a good step. We have to look what can still be use and recycle it to make a new product out of an old staff like newspapers, plastic bottles and so on. Another thing is to start using eco-friendly or environmentally friendly products that will surely not harm the earth and will cause thinning of ozone layer. As college students, we can also gain more knowledge regarding these environmental problems through reading many references. In this way, we can understand the earth's problem well and could address on this problem properly.

It's not yet too late to save the earth. We still have the time to save our mother land. Let's not wait for the time to come when the earth is completely on chaos and extremely devastated to take an action. The change starts within us. Truth be told, we cannot be part of a bigger organization instantly so all we have to do is to start on our own simple ways. Taking care of the earth is our responsibility yet it is also a privilege. Eventhough our action might be simple, but if each one if us, inhabitants of earth would cooperate and work in unity to successfully achieve a common goal which is to save the earth then this will surely be a great helping hand towards saving the earth.
