Universidad de Zamboanga
Zamboanga City, Philippines

As all we know, that we are now experiencing a different kind of calamities in our country such as flood, landslide, pollution and other unexpected tragedy.

Everyone, are now asking, why these things happen? This kind of question makes us wonder. If these things happen to us, we must be ready to face it. But then, there are many ways to prevent this kind of tragedy. We should help our self and others to save our Mother Earth. Because we people living on earth, we were the ones who are destroying it. But the question is who will save us? We people will be the savior of our selves. We should know how to value the things given to us by God and not to abuse it. If these things will be destroyed, what will happen to the future generation? They will be the one to suffer. No clean water, no fresh air, no food, all these things needed in their daily life. They can't find it easily or they will no longer find it. It would be so sad to see our children suffering because of us. But it is not yet too late. We should change our attitude, love our surroundings and everything is in order to save our Mother Earth.
