Universidad de Zamboanga
Zamboanga City, Philippines

Earth is very important part of our lives. A planet inhabited by man, a planet that we must know on why we have to save, how to save, ways to cure, love and what to be done to save out Mother earth. As responsible individuals we should at least do what we can to help maintain the cleanliness in our environment. Let's discuss first, why we have to save the earth. Well, to save the earth is a responsibility for all of us. We should preserve a green earth for future generations on this planet, more conservation practices and more efficient management of wastes. It's not an easy thing to do this in our own. All of us must unite to maintain the cleanliness. Saving the earth is very significant in our lives. It is a very long way for us to go to save the earth.

In saving the earth, there are ten tips for us to be followed. First, remind the politicians that you have a vote and a voice about environment. Every one of us has the freedom to express or tell how important the environment was and to the future generations. Second, it is great to talk about how important the earth's environment is to us, but it is more important to put words into action. Third, many grocery stores sell reusable bags (usually 99cents) buy them and use them. Fourth, this is an easy one but is quickly forgotten; turn off the lights when you are not in the room. Also, unplug your appliances when not in use; even when not in use they can be an energy sink just being plugged in. Fifth, plant a tree or other plants. Planting a tree will help in the environment. Planting plants too like for example edible plants it will feed us healthy food. Sixth, use refillable bottles for water. Seventh, reuse what you can, like boxes for mailing and padded envelopes can have several uses in them. Eighth, plan your trips and combine as many errands into an outing as possible. Ninth, use natural cleaners whenever possible like lemons and baking soda. Tenth, pay your bills online and save a tree. We already knew the ten tips. Next to this is the ways to cure the earth. Speaking about ways there are many ways to cure the earth. Well, of course we can't do it in our own way. All of us unite for the sake of our planet. These ways are for my own opinions only. First, we must separate biodegradable and non-biodegradable wastes. Second, avoid throwing that garbage in seas, ponds, canals, or in any place. We must throw it in proper places. Third, avoid burning your garbage because the more you burn it the more pollution we will be experiencing. Fourth, stop cutting trees, they are the ones which give us fresh air. Fifth, stop killing animals like birds.

Love the earth. Many questions may arise in this topic. In my own, I was confuse in what way we will love the earth. How to do it? Why should we do it? Well, we should love

earth not only because we're here but because God sent us here to take care his works. The trees, animals as in everything in this world were made by God. Loving earth might be very difficult for those uninterested but to those interested it was a very easy thing to do. All of us must love the earth. The question is, are we doing it?
