Every individual should perform their obligations and give contributions for the betterment of earth, it is not only to live be our purpose but to love and take care of what God gave us. Earth is the only planet which is suitable and serve as a very wonderful place for every individual in return they have to take care of it, because if earth will be destroyed no other places in exchange of living, so we have to be grateful of what we have.

The Save Earth Foundation functions as a non-profit public benefit which contributes a larger beneficial in taking care of our earth, it is dedicated to the expansion of environmental awareness in our society. They are supporting scientific research and educational programs, we are optimistic that our work will have to solve our earth's problems. With the support of people from all walks of life we are confident that our efforts will help to reverse the environmental deterioration of our planet. The following are some ways on how to save the earth.

Recycle, every places should provide recycling center which take in charge in recycling the cans, papers, brown bags, cardboard boxes or plastic containers, it can be used to make a number of products, such as plastic lumber and fiberfill sleeping bag insulation.

Another is planting trees. It makes an effective way to fight for the greenhouse effect. So every individual should take and plant a tree, for those places having deforestation. It is not a hard to do, it is easier so we don't have to become lazy, it is for our own benefit having a lot of trees prevent flooding, which destroy thousands of houses and livelihood.

Drive less, cars have a serious impact on the environment but because we depend on them in our daily lives, it's unrealistic to suggest that people stop driving all together. Cars are responsible for 34% of the US nitrogen oxides (which can cause acid rain), 27% of the smog causing hydrocarbon, we have to always put and think to how be the proper way of using cars.

Each person has a responsibility to take action against these atrocities. There are numbers of ways we can get involved to help save endangered marine animals. Earth is very important part of our lives. Most of us wouldn't think of polluting our bodies, yet we are polluting our planet by misuse and overuse of our natural resources. As responsible individuals we should at least do what we can to help reduce, reuse and recycle what we can as a first step.

We are not completely to blame, we inherited a polluted earth but we can do something to ensure that our children can grow up in a cleaner, safer planet than ourselves. Don't ever let someone get away with saying, "What can I do, I am only one person". Each and every person can do a lot, and you can influence others to do something as well.

Actions are necessarily being done as early as possible, so what we are waiting for? If it is nothing to do more save our earth?
