Universidad de Zamboanga
Zamboanga City, Philippines

Our planet is slowly being destroyed nowadays. If we do not move to save it, then it will be a big loss for us, for our life depends on it, on the environment we live and on God. Once Mahatma Gandhi Said, "Earth provides enough to satisfy every man's need, but not every man's greed."

Most of us noticed that today we experience biodiversity loss. The loss of habitat of the species through cutting down trees which causes their extinction. When there are no more species, we experience problem again which is the food shortage. And since there were no more enough trees, pollution can't be cured which causes again extinction of some species and diseases for the people. Nowadays too, we experience population boom, especially our country. More and more people need to occupy more spaces for them to be able to live, and unemployment takes place resulting to crimes like stealing, kidnapping and the like. And since we are overpopulated, we consume more, just like food, water, shelter, and many more others. Overconsumption is again another problem.

The situation cited above leads us to formulation of answers on why do we have to save the earth. Of course, without earth, we'll not be present. Earth, as what I've said earlier is where our life depends. It provides us our basic necessities just like food, water and air, and it is where we live. If we'll not help the earth we'll encounter so much problems. These problems disturb us, and so, we can't move freely anymore. We have to save the earth because it is where we live and so our future families. If we don't then what will happen in the future? It will be worst if we don't move now.

God entrusted the earth to us. If we fail then it means that we are not responsible at all. God created us, all living things even the earth, through His image and likeness. If we'll not take good care of it, then it only shows that we're taking for granted God's creations that we don't even bother to start with our own little ways. God feels if we don't take care of his creation, that's why he punishes us. We can really see it clearly because in the present time, it seems like it's hard to live anymore, we experience big disasters and natural calamities and many others. Our planet is a precious gift from God, so we need to show our deep appreciation by loving it, taking good care of it and saving it.

Earth and life comes as one. If we save the earth, we save life. If we don't then we are slowly killing, not only our environment, but ourselves too. It just depends on us what to choose. Because for me, I choose to save the earth so that I can save my life, your life, our lives.
