Nowadays, our Mother earth is now in danger, we have to take direct actions for it. We have to save it, because it's our life. It is which provides everything we need in our daily lives. We are the children of the earth. God created us to protect, to love, to maintain and sustain the balance of our Mother Earth, because she is our home and our life. She loves us, she gave everything that we need for our daily life and she never failed to give it to us, even if it means hurting her or destroying her. She will give everything we wanted. She gives us food for us to survive, she gives us shelter for us to live so that we can have our own home. She also gives clothing so that we will never shiver in times of cold and to protect our body.

But we, as her children, are always putting her in danger or we just put our Mother Earth in a wrong place. We are risking her life, because of our greed, we learned to gamble to do negative actions to her and we are making ways for the annihilation of our home above all we are mostly doing our negative interest like cutting a lot of trees to earn a lot of money, quarrying, mining and killing the small life of the animals in the forest or the endangered animals, and the pollution that people are always releasing, the green house effect and other harmful things. Our community and our surroundings became more complicated to live. Maybe a year from now our beloved home will soon come to its own destruction. And we as a human being, we are responsible for this problem. We should wake up and be aware of what is going on. If we are unable to solve this things then our beloved planet where we grew will no longer functioning to human and to other creature. We still have our chance to restore and make some good action to our Mother Earth, discipline ourselves to do good things not to do bad things that can destroy our mother nature. It's already time for us to change. Wake up now. Make some action for it. Start it now. Don't wait until one day our earth will no longer functioning, think now.
