Why do we have to save the earth? For me, the earth is very important not just for us, but also for the animals that are living. The earth is the only shelter or planet that we have, and so, we should and must take care and save it.

Different kinds of pollution had and till continuing destroying our earth. In reality, we people don't even care on what are going to be the effects of what we have done to this earth. We won't care until the day will come that the earth will have revenge to us. We are all actually abusing the earth after all what it gave to us, like fruits, natural resources, fishes, and etc. It is so sad to think that only a few people do care to save the earth and almost 80% don't even bother to think on how to or how they can help in their simple own way. After years, what would be the appearance of our planet? Maybe there will be no trees at all and the rivers might be very dry. Let us start to think what we can do to save the earth. Not just think, but we must act also our plan. Let us join and invite our friends some organization of saving the earth because the earth is all we have got where in we can peacefully live.
