

“How to save our Environment”

Cuadra, Hazeline T.
School of Allied Medicine
Universidad de Zamboanga
Zamboanga City

To be able to save the environment we shall take care of it. Such as cleaning, sweeping, watering plants, throwing the garbage to the garbage area and etc. if our environment is clean we can feel the fresh air. If it is not clean it can cause diseases. Only us can save the environment/ mother earth so we must cooperate each other so that we can save the mother earth. We are lack of people in cleaning/saving the environment because they are lazy to work/ cleaning the environment. Most of us are messing.

The environment such as throwing the garbage not in proper places. If we still doing it. We can get any diseases from it. Not only that our nation will also suffering because dirty environment/resources causes landslides, flooding and etc. god gave us natural resources so must take care of it. Things that we can get from the natural resource such as food. Shelter and many moves. You see, how beautiful and great the natural resources are save the mother earth. That's all.
