Now a day, our environment is really experiencing a worst thing because we have so much problem facing the environment. We have air pollution, global warming, water pollution and many more that cause us death and may destroy our environment. However, Philippines is still lucky that we have still living things in our environment like the plants and animals, in little way, they can still help our environment is saving it.

I can say that even our environment is on its may to be destroyed we have still many things that we can do to save it. We have a lot of instrument that can help us save our mother earth. But sad to say, some people really ignore about it and leave it hanging and in my case, I want to help even just little things to save our environment. I will encourage people to plant more trees, so that it may prevent landslide. I will stop them throwing garbage's any where especially in the ocean. I will tell them not to burn plastic because it will cause global warming. I will encourage them also to lessen their use of vehicles and jeepneys because it is the main cause of air pollution. This is how I can help to save our environment and I am looking forward that I can do it.
