Universidad de Zamboanga  
Zamboanga City

Now a day, as we can see our environment is slowly destroying. Lots of problem occurred. One is the garbage's, it is said that we must throw our garbage's in a trashcan or in a proper way but some of the human being don't do it. Probably they throw or put their garbage's on the road and in the river and the environment is pollution. In manila, they have many vehicles, where ever you go. There's always pollution and if we can breathe it. It can give us also disease.

Our natural resources also like tree, we must take good care of it. Since it is a blessing from God. We must respect and should not cut just to have money, because one day we will need it like rainy season. Through this, anything that we know that we can give harmful to the health of other people, we should do. We should know how to love our environment so that we won't encounter problems from it.
