To save our environment we have to practice proper garbage disposal so that we can avoid pollution, because one of the big reason of destroying our environment is the garbage that being disposes anywhere of the side and sometimes in the street so when the heavy rain come all the garbage that improper disposed is carry out in the floods. So that we encounter problems in our surrounding after the flash. So that the proper garbage disposal is important to save our environment.

Also planting tree and stop cutting big tree is important to save environment. Because when the rain come the tree were absorb the water so that it cannot produce landslide and floods so planting tree is important to prevent landslide and to help our environment clean and safe.
